

# A/B Test Rotation Schedule

## 10 Priority Posts | Three-Cycle Hook and Caption Plan

Prepared June 2026 | For internal content scheduling and measurement use only

### How to Use This Schedule

*Each of the ten posts in this plan runs through three campaign cycles. Each cycle corresponds to one full publishing round of the post. Allow at least 7 days of live data per cycle before recording results and rotating to the next variant. Record metrics in the results tracker at the close of each cycle before publishing the next.*

| Cycle   | What to Run                                                                                                                    | What to Decide                                                                                                                       |
|---------|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Cycle 1 | Recommended hook variant (see per-post column). Short Caption on Instagram. Long Caption on LinkedIn.                          | Record the key metric listed for the post. Note whether the result meets, exceeds, or falls below benchmark.                         |
| Cycle 2 | Next hook variant (see per-post column). Reverse the caption assignment: Long Caption on Instagram. Short Caption on LinkedIn. | Compare the same metric to Cycle 1. Identify the stronger hook. Note whether caption reversal changed the result on either platform. |
| Cycle 3 | Confirmed best hook from Cycles 1 and 2 (or Cycle 3 variant if noted). Winning caption length locked in for each platform.     | Record final metric. Confirm house format for this post going forward. Archive results in the tracker.                               |

# Full Rotation Schedule by Post

01

Meet the Surgeon Who Changed the Field

Reel | Instagram + LinkedIn | Authority and Credibility

| Cycle | Hook                                                                                                                                          | Instagram Caption                            | LinkedIn Caption                             | Record at Close of Cycle                                                                                                                            |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook A</b><br><i>"Most doctors manage metabolic disease. He is one of the few who can resolve it."</i>                                     | Short Caption                                | Long Caption                                 | Profile visits and bio-link clicks in the 48 hours after posting.<br>Benchmark: above-average profile visit rate compared to other reels.           |
| 2     | <b>Hook C</b><br><i>"When his patients describe what changed, they do not talk about the scale. They talk about getting their life back."</i> | Long Caption (reversed)                      | Short Caption (reversed)                     | Same metrics as Cycle 1.<br>Note whether the emotional framing of Hook C drives higher profile-visit rates than Hook A's category-contrast framing. |
| 3     | <b>Best hook from C1 and C2.</b> If profile-visit rate was equal, default to Hook A for tone consistency.                                     | Winning caption length from C1/C2 comparison | Winning caption length from C1/C2 comparison | Confirm house format.<br>Record final profile-visit rate. Archive hook and caption decision in results tracker.                                     |

13

GLP-1 vs Surgery: A Balanced View

Reel | Instagram + LinkedIn | Education and Evidence

| Cycle | Hook                                                                                                                           | Instagram Caption                 | LinkedIn Caption                  | Record at Close of Cycle                                                                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook A</b><br>(Instagram)<br><b>Hook B</b><br>(LinkedIn)<br><i>Run different lead hooks by platform this cycle.</i>         | Short Caption                     | Long Caption                      | Share rate and comment tone by platform. On LinkedIn: note whether comments engage clinically (GP or clinician audience signal) vs. patient audience. |
| 2     | <b>Hook C</b><br>(Instagram)<br><b>Hook A</b><br>(LinkedIn)<br><i>Hook C targets the direct patient audience on Instagram.</i> | Long Caption (reversed)           | Short Caption (reversed)          | Same metrics as Cycle 1. Note whether clinical comment engagement increased or decreased with the alternative hooks.                                  |
| 3     | <b>Best hook per platform from C1 and C2.</b><br>LinkedIn: retain whichever hook produced higher clinical comment engagement.  | Winning caption length from C1/C2 | Winning caption length from C1/C2 | Confirm hook and caption per platform. Record GP referral enquiry volume if attributable. Archive in results tracker.                                 |

Peter: Choosing Reversal Over Management

Reel | Instagram + LinkedIn | Patient Story and Social Proof

| Cycle | Hook                                                                                                                                                                    | Instagram Caption | LinkedIn Caption | Record at Close of Cycle                                                                                                             |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook C</b><br>(LinkedIn primary)<br><b>Hook A</b><br>(Instagram)<br><i>Hook C leads with the outcome; Hook A leads with the resistance-to-surgery mindset shift.</i> | Short Caption     | Long Caption     | LinkedIn re-shares and clinician comment volume. Any direct GP or endocrinologist referral enquiries in the 7 days post-publication. |

| Cycle | Hook                                                                                                                                                                                         | Instagram Caption                 | LinkedIn Caption                  | Record at Close of Cycle                                                                                     |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------|
| 2     | <b>Hook B</b><br>(Instagram primary)<br><b>Hook A</b><br>(LinkedIn)<br><i>Hook B: "four medications, fifteen years" creates a strong pattern-match for the Peter archetype on Instagram.</i> | Long Caption (reversed)           | Short Caption (reversed)          | Same metrics as Cycle 1. Compare clinician engagement on LinkedIn and patient DM volume on Instagram.        |
| 3     | <b>Best hook per platform from C1 and C2.</b> On LinkedIn, retain whichever hook produced the most clinician re-shares or referral enquiries.                                                | Winning caption length from C1/C2 | Winning caption length from C1/C2 | Confirm format. Record GP referral enquiry volume and total clinician re-shares. Archive in results tracker. |

27

The Moment Patients Describe Most

Reel | Instagram | Patient Story and Social Proof

| Cycle | Hook                                                                                     | Instagram Caption | LinkedIn Caption | Record at Close of Cycle                                                                                                                   |
|-------|------------------------------------------------------------------------------------------|-------------------|------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook A</b><br><i>"They do not describe what they see in the mirror. They describe</i> | Short Caption     | Long Caption     | Save rate and comment depth. Benchmark: save rate above 4% of reach indicates strong word-of-mouth potential and may justify a paid boost. |

| Cycle | Hook                                                                                                  | Instagram Caption                 | LinkedIn Caption                  | Record at Close of Cycle                                                                                                                     |
|-------|-------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
|       | <i>what they feel."</i>                                                                               |                                   |                                   |                                                                                                                                              |
| 2     | <b>Hook B</b><br><i>"Waking up without the heaviness. Making it through an afternoon..."</i>          | Long Caption (reversed)           | Short Caption (reversed)          | Same metrics as Cycle 1. Hook B is more granular: test with the warmer, more familiar audience that has already seen other Meridian content. |
| 3     | <b>Best hook from C1 and C2.</b> If save rate was equal, retain Hook A as the broader-access opening. | Winning caption length from C1/C2 | Winning caption length from C1/C2 | Confirm format. Record final save rate. If above 4%, note paid boost decision in the results tracker.                                        |

29

The Subscription Versus the Specialist

Carousel | Instagram + LinkedIn | Competitive Positioning

| Cycle | Hook                                                                                                                                                       | Instagram Caption       | LinkedIn Caption         | Record at Close of Cycle                                                                                                                                                           |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook A</b><br>(Instagram)<br><b>Hook B</b><br>(LinkedIn)<br><i>Run both platforms simultaneously this cycle. Hook B names the price point directly.</i> | Short Caption           | Long Caption             | Carousel swipe-through rate (aim above 60% reaching slide 3). Saves-to-likes ratio: a high ratio indicates the post is being retained for reference, signalling downstream intent. |
| 2     | <b>Hook C</b> (both platforms)<br><i>The most neutral,</i>                                                                                                 | Long Caption (reversed) | Short Caption (reversed) | Same metrics as Cycle 1. Note sentiment of any comments. Compare                                                                                                                   |

| Cycle | Hook                                                                                                                           | Instagram Caption                 | LinkedIn Caption                  | Record at Close of Cycle                                                                              |
|-------|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------|-------------------------------------------------------------------------------------------------------|
|       | <i>educational variant. Use if Hook B in Cycle 1 produced negative sentiment comments about tone.</i>                          |                                   |                                   | swipe-through rate against Cycle 1 baseline.                                                          |
| 3     | <b>Best hook per platform from C1 and C2.</b> If sentiment was clean in both cycles, retain Hook B on LinkedIn for directness. | Winning caption length from C1/C2 | Winning caption length from C1/C2 | Confirm format. Record final swipe-through rate and saves-to-likes ratio. Archive in results tracker. |

What \$49 Gets You. What It Does Not.

Static Post | Instagram | Competitive Positioning

| Cycle | Hook                                                                             | Instagram Caption       | LinkedIn Caption         | Record at Close of Cycle                                                                                                                                               |
|-------|----------------------------------------------------------------------------------|-------------------------|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | <b>Hook B</b><br><i>"When the subscription stops working, what is the plan?"</i> | Short Caption           | Long Caption             | Share rate. Benchmark: above 2% of reach. A high share rate justifies paid audience expansion targeting users who have engaged with GLP-1 content in the past 90 days. |
| 2     | <b>Hook A</b><br><i>"What a low-cost metabolic subscription gives you."</i>      | Long Caption (reversed) | Short Caption (reversed) | Same metric as Cycle 1. Hook A is list-structured: note whether the structured format drives higher share rate than                                                    |

| Cycle | Hook                                                                                    | Instagram Caption                 | LinkedIn Caption                  | Record at Close of Cycle                                                                                   |
|-------|-----------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------|
|       | <i>And the seven things it cannot."</i>                                                 |                                   |                                   | Hook B's question framing.                                                                                 |
| 3     | <b>Best hook from C1 and C2.</b> If share rate was equal, retain Hook B for directness. | Winning caption length from C1/C2 | Winning caption length from C1/C2 | Confirm format. Record final share rate. If above 2%, note paid expansion decision in the results tracker. |

## Metrics Quick Reference

Each post in this schedule tracks a primary metric suited to its strategic role. Record results using the results tracker document. The table below consolidates all primary metrics and their benchmarks for at-a-glance scheduling reference.

| Post | Title                         | Primary Metric                             | Benchmark                                | Window                |
|------|-------------------------------|--------------------------------------------|------------------------------------------|-----------------------|
| 01   | Meet the Surgeon              | Profile visits + bio-link clicks           | Above average vs. other reels            | 48 hours post-publish |
| 13   | GLP-1 vs Surgery              | Share rate + clinical comment volume       | Clinician engagement on LinkedIn         | 7 days post-publish   |
| 21   | James: The Executive          | DM volume + profile-to-website rate        | Higher DM rate vs. other patient stories | 7 days post-publish   |
| 23   | Sarah: After Years of Trying  | Save rate (% of reach)                     | Above 3% of reach                        | 7 days post-publish   |
| 25   | Peter: Reversal vs Management | LinkedIn re-shares + GP referral enquiries | Any clinician re-shares or referral DMs  | 7 days post-publish   |

| Post | Title                            | Primary Metric                              | Benchmark                         | Window                      |
|------|----------------------------------|---------------------------------------------|-----------------------------------|-----------------------------|
| 27   | The Moment Patients Describe     | Save rate (% of reach) + comment depth      | Above 4% of reach                 | 7 days post-publish         |
| 29   | Subscription vs Specialist       | Swipe-through rate + saves-to-likes ratio   | Above 60% reaching slide 3        | 7 days post-publish         |
| 30   | What \$49 Gets You               | Share rate (% of reach)                     | Above 2% of reach                 | 7 days post-publish         |
| 49   | Is This the Right Time?          | Website enquiry volume + link-in-bio clicks | Above baseline for campaign       | 72 hours post-publish       |
| 50   | One Conversation Could Change... | Direct consultation enquiry rate            | Above baseline for campaign close | 48 to 72 hours post-publish |

## Cycle Decision Rules

**Between Cycle 1 and Cycle 2:** Record the primary metric in the results tracker before publishing the Cycle 2 version. Do not rely on memory. The rotation only produces usable data if results are logged at the close of each cycle, not retrospectively.

**Between Cycle 2 and Cycle 3:** Compare the Cycle 1 and Cycle 2 metric values. Select the stronger hook. If the difference is less than 15% (relative to the higher value), treat the hooks as equivalent and apply the tiebreaker noted in the per-post Cycle 3 row above.

**Caption length decision:** At the close of Cycle 2, compare platform performance under each caption assignment. If Short on Instagram outperformed Long on Instagram in both cycles, Short becomes the Instagram standard for that post. If the reversal in Cycle 2 produced a meaningfully better result, that length becomes the standard.

**After Cycle 3:** The winning hook and caption length for each post are confirmed as the house format for that post going forward. Archive all three results in the results tracker before closing the cycle. Do not run a fourth cycle unless a post is being materially reedited or relaunched for a new campaign.

This document maps each of the ten A/B test priority posts from the Meridian Health Metabolic Dominance Campaign to a three-cycle hook and caption rotation plan. Hook and caption variants are sourced from

*meridian-content-abtests.html*. Cycle 1 runs the recommended opening hook per platform with Short Caption on Instagram and Long Caption on LinkedIn as the default. Cycle 2 rotates to the next hook variant and reverses the caption assignment. Cycle 3 runs the confirmed best hook with the winning caption length locked in. Metrics should be recorded in the results tracker at the close of each cycle. All clinical copy requires review by Michael prior to publication. Prepared June 2026 for internal scheduling and measurement use only.
